CHINMAY CHOUDHARI

AI/ML Intern

Bengaluru, Karnataka, India | +91 8317465866 | chinmaychoudhari510@gmail.com
linkedin.com/in/chinmay-choudhari | github.com/Chinmay-C12331 | chinmay-jc.vercel.app

PROFESSIONAL SUMMARY

Computer Science and Engineering undergraduate (CGPA 9.27/10) seeking an AI/ML Intern role, with AI/ML coursework and project experience in Python, LLM integrations and RAG applications.

EDUCATION

Bachelor of Technology, Computer Science and Engineering 2024 – Expected 2028
Presidency University, Bengaluru **CGPA: 9.27/10**
Relevant Coursework: Essentials of Artificial Intelligence (completed); Machine Learning (currently studying, theory and laboratory; supervised learning module completed)

TECHNICAL SKILLS

Languages: Python (Intermediate), C, Java (Beginner), JavaScript and TypeScript (project experience)
AI/ML and GenAI: Google Gemini API, Google GenAI SDK, LLM Integration, RAG, Embeddings, ChromaDB, LangChain, Hugging Face Embeddings, PyTorch, ONNX, Feature Engineering, Deep Learning fundamentals
Data Science and ML (coursework and labs): Pandas, scikit-learn, Matplotlib, Seaborn, Supervised Learning fundamentals, Data Preprocessing and Analysis, Data Visualization
Web (project exposure): HTML, CSS, Bootstrap, React, Next.js, Tailwind CSS, Node.js, Streamlit
Tools and Platforms: Git, GitHub, Docker, n8n, Figma, MySQL, OAuth 2.0, Google AI Studio, Google Cloud Console, AI-assisted development (Gemini, Claude)
Fundamentals: Data Structures and Algorithms (beginner; HackerRank: arrays, strings, loops, functions), DBMS, OOP

EXPERIENCE

Web Development Intern, InAmigos Foundation May 13, 2026 – May 26, 2026

- Developed and improved NGO awareness webpage content using HTML, CSS and Bootstrap concepts.
- Analyzed the NGO website and contributed UI/UX improvement suggestions; designed Figma layouts for donation, volunteer registration, impact statistics, campaign showcase and testimonial features.
- Improved a portfolio website using AI-assisted development tools and frontend fundamentals.

PROJECTS

ScamSniffer - *AI Fake Offer Letter and Phishing Inspector (individual project, PromptWars AI Challenge)* GitHub Repository
Technologies: TypeScript, Node.js, Python, Google Gemini, Google GenAI SDK

- Built a web application that inspects job offers, recruiter messages and recruitment URLs across six fraud vectors and returns risk findings backed by evidence cited from the input.
- Separated language understanding from scoring: Gemini extracts linguistic evidence while a deterministic rule engine computes an auditable 0-100% Scam Threat Index; returns "UNABLE_TO_VERIFY" instead of fabricating domain metadata.
- Repository README documents 24 Node.js and 12 Python tests passing, plus an interactive in-app self-test.

EcoTech PU - *Campus Resource Intelligence Dashboard (team project, IEEE 5-hour hackathon)* GitHub Repository
Technologies: TypeScript, React, Vite, Tailwind CSS, Node.js, Express

- Contributed to a team-built dashboard for electricity, water and waste data with baseline comparison, rule-based anomaly detection and CSV ingestion; deviations are investigation triggers, not confirmed waste.
- Individual contributions: research-driven AI Studio prompting, development and deployment. Features include an explainable 0-100 priority score (severity, persistence, confidence, effort) and a Measure, Detect, Act, Verify corrective-action workflow.
- Uses simulated demonstration data, not live sensors; repository README documents 59 passing automated tests.

RAG-Based PDF Chatbot - *Individual project* GitHub Repository
Technologies: Python, Streamlit, LangChain, ChromaDB, Hugging Face Sentence Transformers, Google Gemini API

- Built a document question-answering app using Retrieval-Augmented Generation: uploaded PDFs are split into 1,000-character chunks with 200-character overlap, embedded with Hugging Face sentence-transformers and stored in ChromaDB.
- Retrieved the top three chunks to ground Gemini answers in document context, with prompt instructions to state when information is absent, and displayed source page numbers.

AI-Based Password Strength Prediction - *Individual research prototype* GitHub Repository
Technologies: Python, PyTorch, Deep Learning, Feature Engineering, ONNX

- Developed a hybrid password guessability model: a two-layer bidirectional LSTM with additive attention pooling fused with an MLP branch over 22 engineered pattern features, trained with an asymmetric Huber loss to penalize overestimation.
- Built the data preparation, training and evaluation pipeline and an ONNX INT8 export for client-side inference; validated on synthetic demonstration data only, with no real-world performance claims.

CERTIFICATIONS

Programming with Generative AI, NPTEL (IISc Bengaluru) August – October 2026
ELITE Certification; Score: 60%; 3 Credits Recommended

ACHIEVEMENTS AND ACTIVITIES

- Second Place, Tech Tambola, Technopia, Presidency University (January 2026); two-person team.
- Participant, PromptWars AI Challenge (GEN AI CLUB, Presidency University and Hack2Skill); built ScamSniffer.
- Participant, Build with Trea Hackathon (Team Dark Pulse); contributed to a team University Face Attendance System using face recognition.
- Participant, AWS Core Skills Bootcamp, AWS Student Builder Group, Presidency University (1 September 2026).
- Completed Model Context Protocol (MCP) Mega Workshop, NxtWave CCBP 4.0 Academy.
